AI PRODUCT BUILDER | RAPID PROTOTYPER | AI ADOPTION LEADER

SUMMARY

I build AI products that solve real problems. I am happiest with an ambiguous problem, a small team, a deadline, and permission to build something useful. I move quickly from idea to working software, learn through real user feedback, and keep iterating until the product makes someone's life easier. Alongside 26 years of enterprise technology experience, I have recently shipped multiple independent AI products and led practical AI adoption inside a Fortune 500 environment. I build for outcomes beyond the software itself. The best product helps people need it less because their real life is getting better.

CORE STRENGTHS

Zero-to-One Product Building: rapid prototyping, discovery, user feedback, iteration, shipping

Technical Fluency: Claude Code, Cursor, Next.js, Supabase, Vercel, GitHub

Enterprise Delivery: stakeholders, governance, adoption, executive communication

Generative AI: LLM products, AI assistants, agents, prompt design, safety and guardrails

Human-Centered Product: trust, autonomy, behavior, accessibility, responsible AI

Builder Mindset: hackathons, ambiguity, experimentation, learning by creating

PROFESSIONAL EXPERIENCE

Senior Lead Technology Business Systems Consultant | Wells Fargo | 2022 - Present

- Turn ambiguous business problems into working solutions, moving from discovery through rapid prototyping, user feedback, iteration, and adoption across a large enterprise environment.
- Lead practical AI adoption through workshops, weekly use-case guidance, prompt libraries, learning communities, and hands-on support that moved colleagues from basic AI use toward building their own agents and workflows.
- Partner directly with managers, project teams, and senior leaders to understand the real problem before choosing the technology, then build or coordinate the solution.
- Designed and delivered 20+ executive-facing Power BI dashboards and 100+ reports, apps, and automations that reduce manual work and improve decision-making.
- Lead governance and support for 2,000+ SharePoint sites while continuing to prototype new AI and automation experiences.

Senior Technology Business Systems Consultant | Wells Fargo | 2012 - 2022

- Led enterprise and divisional execution initiatives through scalable digital solutions, business-process redesign, reporting, workflow, and collaboration platforms.
- Served as a trusted bridge between business stakeholders and technology teams, translating ambiguous needs into adopted solutions used by leadership and operations teams.

E-Business Systems Consultant / Technical Learning & Development | Wells Fargo | 2003 - 2012

- Selected across multiple cohorts of a competitive enterprise technology leadership program for top-performing employees, including lead project management responsibility for a data and information management cohort.
- Supported Office of the CIO and cross-functional technology initiatives, building early depth in program delivery, change, learning, and technology adoption.

THINGS I'VE BUILT

TalkToHudson.ai | Founder / Product Builder | 2025 - Present

- Built a safety-first AI support product after seeing both the benefits and risks of general-purpose AI for someone I love; shipped the first usable version over a long weekend and continue iterating with users and clinicians.
- Built daily check-ins, grounding and growth tools, trusted-contact permissions, persistent state, voice experiences, and clinician-facing capabilities with safety and human escalation designed into the product.
- Hands-on stack includes Claude Code, Cursor, Next.js, Supabase, Vercel, GitHub, and ElevenLabs.

Pattern18 | Founder / Product Builder | 2025 - Present

- Built an AI-powered product for high-conflict family-court workflows that organizes evidence, creates timelines, surfaces patterns, supports calmer communication, and prepares structured information for legal professionals.
- Designing around real user and family-court workflows, court-order context, privacy boundaries, and future attorney dashboards.

Indispensable | Founder | 2026 - Present

- Built a live AI learning community where professionals solve real workplace problems through structured learning paths, live Q&A, workflows, agent-building, and practical experimentation.
- Designed as a workshop rather than a course: members build useful solutions and gain enough confidence to eventually need the community less.

EDUCATION & CERTIFICATIONS

Master of Science, Information Management | Arizona State University, W. P. Carey School of Business

Bachelor of Science, Information Technology | DeVry University

Bachelor of Arts, Psychology | University of Alaska Anchorage

Project Management Professional (PMP), earned 2005

Prompt Engineering for AI Applications, 2025

ADDITIONAL

Former collegiate gymnast and longtime gymnastics coach. Commercial-fishing experience in Alaska.

I learn by creating, not by theorizing. I build, test, listen, and improve.
